PHILIPS

Professional Display Solutions

Philips E-Line, E is for:
education / efficiency / engagement / energy / efficacy

E is for education

Create a classroom that levels in learning. The Philips E-Line education display supports teachers, lecturers and instructors across all disciplines with intuitive technology that can awaken learners' curiosity and inspire imagination.

Effective, efficient, engaging

Built on an Android SoC platform for a truly intuitive user experience, and featuring multi-touch technology and whiteboard mode, this innovative touch screen has been designed together with educators, especially for education.

Evolve your education setting with all the latest features:

Wireless screen sharing

Display four feeds on the one screen. Wireless screen sharing allows you to connect up to 64 devices at the same time for quick content switching when you need it. Use your existing Wi-Fi network to instantly and securely connect devices, or the Interact dongle to connect guest speakers and remote access students logged in using an external network.

Whiteboard mode

Inspire agile collaboration with whiteboard mode. Simply activate this feature to turn your display into a blank canvas that can be drawn on by multiple users by hand or with dedicated display markers. Everything on screen can then be streamed back to your laptop for easy printing or file sharing.

Video conferencing

Built-in video conferencing makes video calls with single or multiple people quick, reliable and easy. Simply connect a compatible camera and use the included software, or connect via third party apps such as Skype, Zoom and others to make your calls.

Complete with all the features and applications needed to deliver effective, efficient and engaging lessons and lectures in the classroom, the E-Line is a great solution for students and educators in a hybrid, distance and flex-learning environment, too.

Infrared Touch with USB Plug-and-Play

Experience a better way to control content. Simply plug your existing laptop or desktop to enable touch functionality on the big screen instantly. USB plug-and-play means that no installations or configuration is required, with options to plug removable devices from the side or having them fixed from the back.

Interactive education display featuring multi-touch

Create a memorable interactive experience with up to 20 touchpoints at the same time. Perfect for collaborative and competitive applications, this display connects your audience with any content - making it ideal for education, public venues, corporate, hospitality, and retail settings. The touch panel is HID compliant, providing true plug-and-play operation.

WELCOME TO OUR POLESTAR
SHINE BRIGHTER

Light up LED for 2022
Your VIP preview on 13-14 April

The Philips 7000 Series High Bright LED display is ready for launch and you are invited to join us for our VIP event at MK7 - the Red Bull Racing Technology Campus in the UK.

Welcoming you with a team dinner on 13 April, you will be one of only 20 of our partners invited for a first encounter of this pole star product - lighting up our direct view LED display range with high end high brightness at a special event on 14 April.

Your travel, accommodation and meals for this exclusive event will all be included - flying into London on 13 April, and flying home after the event on 14 April.

We hope you can join us.

PHILIPS

Professional Display Solutions

True beauty lies within

Sophisticated. Feature-rich. Philips MediaSuite

It's all about the experience. Whether in the lobby or the lift, the bar or the spa. In the hotel room, guests expect even more. Last year's trends for home-from-home comforts continue to dominate, while sleek style and smarter technology that can personalise experiences are swiftly becoming essential factors that the right hotel TV can deliver – efficiently, effectively and extensively.

As the world continues to open out to both leisure guests and business travellers, adapting the hotel room to fit their differing needs doesn't need to be time consuming or cost prohibitive. The right connections are key, giving easy and intuitive access to individualised activity information, personal streaming services and favourite apps for guests' downtime, while also offering the possibility for casting presentations and documents for work, all onto the big screen.

For hoteliers looking for the competitive edge, easy integration and efficient personalisation are key factors, while reduced cost of ownership and sustainability impact continue to rise in importance.

When it comes to fulfilling those requirements – from guest expectations through to return on investment, Philips MediaSuite has it covered.

Keeping it all within – the power of Android TV with Chromecast built-in

Google-certified and with Chromecast built-in, with Philips MediaSuite guests can easily connect to the apps they want to use – whether that's for their subscription services such as Apple TV+, YouTube, Spotify and Disney+ or to stream their own content – all in up to Ultra HD 4K resolution.

It also offers full access to the Google Play store, allowing guests to download Google-approved content, including more than 10,000 cast-enabled Android apps, 200,000 TV programmes and films and 30,000,000 music tracks.

Discover the full Philips MediaSuite range ppds.com/display-solutions/professional-tvs/mediasuite

For hoteliers, Philips MediaSuite brings all the benefits of casting, while delivering on integration efficiency, with no need for additional dongles and peripherals that may be costly, unsightly, and easy to tamper with.

 **87% of business travellers always use the TV in their hotel room? Enabling them to work, rest and play intuitively and efficiently on the big screen can give your hotel the competitive edge.**

Streaming the bigger picture, including Netflix-embedded

Netflix is enjoyed globally by over 220 million paid subscribers and, uniquely to this range, Philips MediaSuite hospitality TVs offer the option to have this popular streaming platform as an seamlessly embedded feature. Embedding Netflix is easy to install with a Hotel PMS – and it's truly secure, with any trace of the guest's information being wiped from the TV at checkout.

 **82% of holidaymakers like to have access to their VoD content? The ability to view their favourite streaming services and apps on the hotel TV brings better returns.**

And providing access to guests' own streaming channels brings the potential for further cost efficiencies for hoteliers, too. On Philips MediaSuite TVs, where Netflix and Chromecast are offered as standard, viewing of linear channels drops by approximately 50 percent, bringing the opportunity to lose expensive licences to some, often unused, linear services.

Bringing in guest returns with reduced cost of ownership

Promising an extended lifetime and reduced cost of ownership doesn't come with a catch. Powered by Android, the software on the Philips MediaSuite can be easy updated whenever a new release is available. Which means that the power of the latest model is available on your existing fleet to deliver the latest features and functionality without the need to replace the hardware.

And with some of the best energy ratings on the market, they are less costly for the environment and a more sustainable choice for the bottom line, too.

The Philips MediaSuite range is available in a wide selection of sizes, from 32" to 75" models, including Full HD and 4K Ultra HD options.

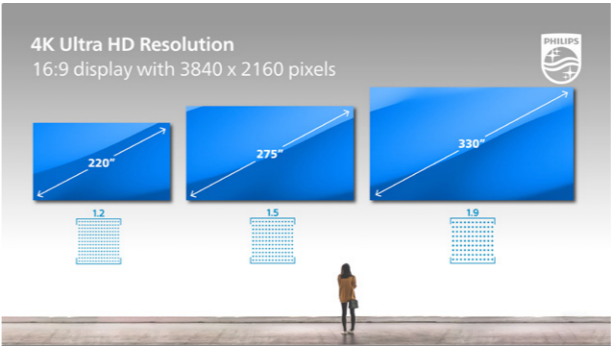

Bring unrivalled connectivity to your hotel guests with Philips MediaSuite. The hotel TV that is streaming into the future, committed to Chromecast built-in and Netflix-ready.
